

Wireless Bridge BR-500AC Setup Guide

Thank you for purchasing the Wireless Bridge BR-500AC. BR-500AC is the wireless bridge which can add a wireless feature to non-wireless devices (10/100/1000BASE-T network devices). With 2.4GHz / 5GHz band support, non-wireless devices can easily be connected to a wireless network. Enterprise security feature will ensure safe and secure use of wireless communication at an office, factory, etc. where a higher security is required.

This Setup Guide explains how to setup and use BR-500AC in a wireless network.

Package Contents

Following items are bundled with BR-500AC.

- Wireless Bridge BR-500AC
- AC adapter
- LAN cable
- Setup Guide (this document)
- Warranty Guide and GPL Inquiry Card
- Declaration of Conformity (EU/UK model only)

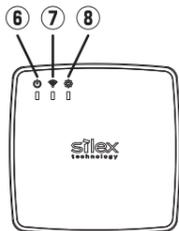

Parts and Functions

FRONT

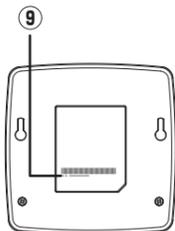

1 Push switch	Starts BR-500AC in Configuration Mode: Press and hold the push switch for 5 sec while BR-500AC is active. Configures BR-500AC using Smart Wireless Setup: Press and hold the push switch for 10 sec while BR-500AC is active. Resets BR-500AC to factory default settings: Press and hold the push switch while turning on BR-500AC. Release the switch when the WLAN LED turns green and then to red.
2 Link LED (Green/Orange)	ON (Green): Linked in wired LAN(1000BASE-T). BLINK (Green): Receiving packets in wired LAN(1000BASE-T). ON (Orange): Linked in wired LAN(100BASE-TX/10BASE-T). BLINK (Orange): Receiving packets in wired LAN(100BASE-TX/10BASE-T). OFF: Wired LAN is not connected.
3 LAN port	Connect the LAN cable.
4 Power LED (Yellow)	ON (Yellow): Powered on OFF: Powered off
5 Power connector	Connect the AC adapter.

TOP

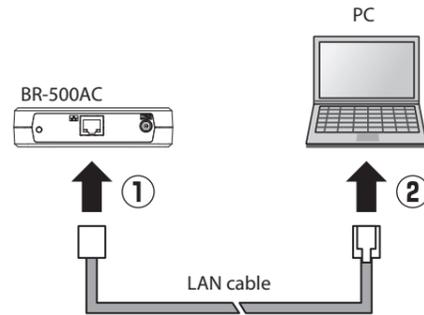

BOTTOM

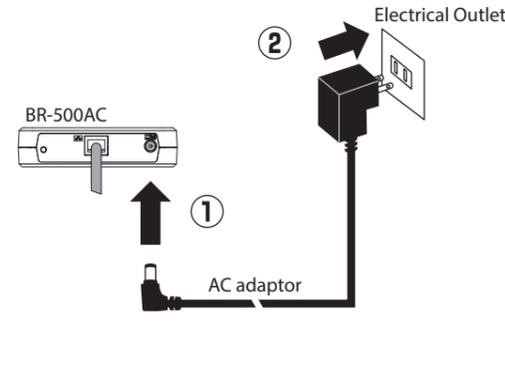

6 POWER LED (Green/Red/Orange)	ON (Green): Powered on OFF: Powered off
7 WLAN LED (Green/Red/Orange)	ON (Green): Running in Infrastructure mode. BLINK(Green): Processing setup using the Smart Wireless Setup. OFF: Wireless LAN is OFF. * Blinks together with STATUS LED when running in Configuration Mode . * Turns green and then to red during the initialization.
8 STATUS LED (Green)	ON (Green): AP is connected. BLINK(Green): Transferring data. OFF: AP is not connected. * Blinks together with WLAN LED when running in Configuration Mode .
9 MAC Address	MAC Address of BR-500AC

Step1 Start BR-500AC in Configuration Mode for Password Configuration

1 Connect BR-500AC to the PC using the LAN cable that came with BR-500AC.

2 Connect the AC adapter to BR-500AC, and the AC adapter's plug to an electrical outlet.

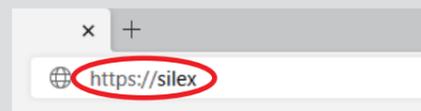

4 The Web browser is started and the password configuration page of BR-500AC is displayed.

If a warning screen appears, click **Advanced** and then click **Continue to xxxxxx (unsafe)**. Enter the password to set for BR-500AC and click Submit. The password registration will perform and BR-500AC will be restarted. When all LEDs turn off and then the POWER LED turns green, the restart is finished.

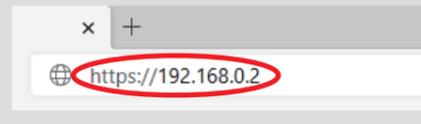

* Recommended Web browsers: Microsoft Edge / Safari
* The login password configuration page is displayed only when BR-500AC is configured for the first time.

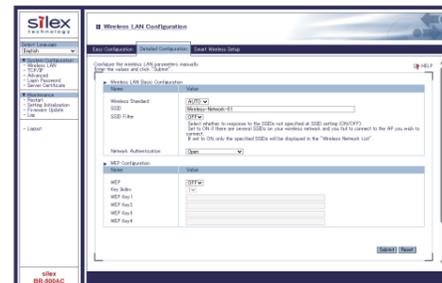

* If the Web page is not displayed, enter "https://silex" in the address bar of the Web browser and press the **Enter** key.

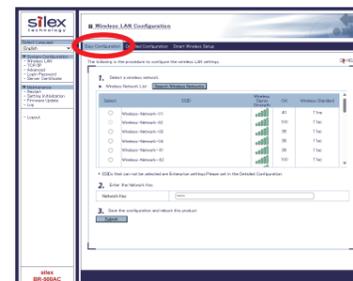

* If the Web page is still not displayed after entering "https://silex", you need to check the IP address of the PC connected to BR-500AC. If a static IP address is configured to the PC, enter the PC's address after adding 1 to its last digit and press **Enter** key.

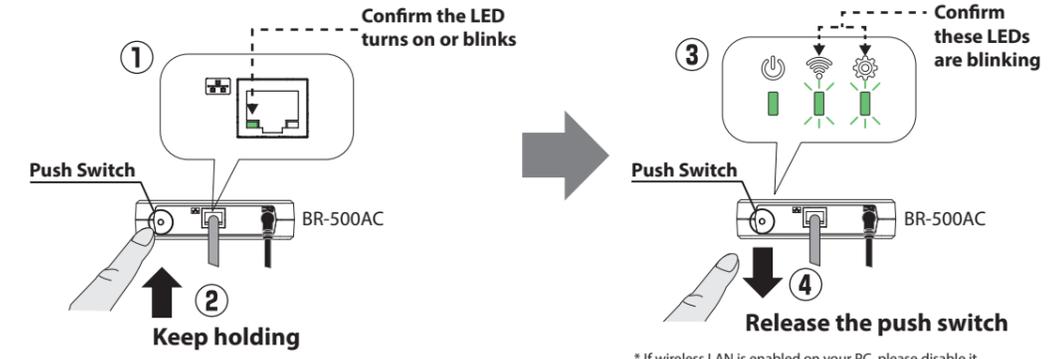

2 The Web page of BR-500AC is displayed.

3 Click **Easy Configuration** at the top of the page. Select the destination network from **Wireless Network List** and enter the WEP Key or Shared Key for **Network Key**. Click **Submit** when finished.

3 When the POWER LED turns green and the Link LED turns on or blinks, press and hold the push switch on the front of BR-500AC. In 5 seconds, the WLAN LED and STATUS LED will start to blink green together. Release the push switch then. BR-500AC will start running in the Configuration Mode and be ready to configure from the PC that has been connected to BR-500AC via a LAN cable.

* If wireless LAN is enabled on your PC, please disable it.

Step2 Wireless Network Connection

When the password configuration is finished, connect BR-500AC to the wireless network. There are two connection methods below.

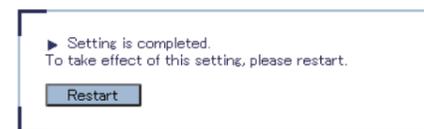

- 1) Selecting a wireless network to connect
- 2) Using Smart Wireless Setup

Selecting a Wireless Network to Connect

1 Start BR-500AC in Configuration Mode according to 3 and 4 of the Step 1. Enter the login password you have configured and click **Login**.

4 When the confirmation message is displayed, click **Restart** to restart BR-500AC. The configuration has now been completed.

5 To give a wireless feature to the same PC (the one you have been using for configuration), please restart the PC. To give a wireless feature to the other device, turn off both BR-500AC and the PC, and remove BR-500AC from the PC. Refer to **Step3** to connect BR-500AC to the network device using a LAN cable.

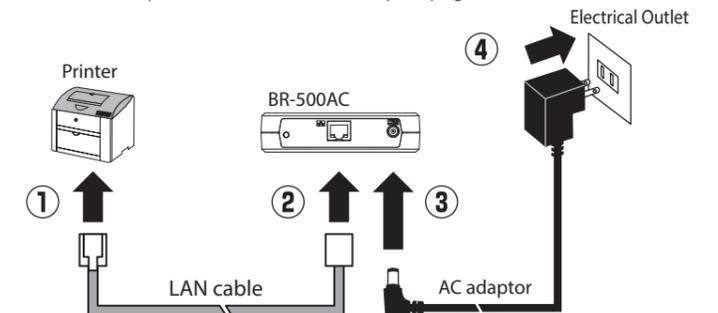

Using Smart Wireless Setup

BR-500AC allows you to configure its wireless settings easily using a push switch if your wireless router supports WPS (Wi-Fi Protected Setup). How to configure wireless settings using the push switch is explained.

NOTE

- Before you begin, the password configuration needs to be finished on BR-500AC.
- For wireless configuration using WPS, your wireless router must support WPS. Make sure that your wireless router supports WPS and is turned on in your environment.
- During this configuration, please temporarily move BR-500AC closer to your wireless router to make it easier for both devices to communicate.
- WPS may need to be enabled manually on your wireless router. For details, refer to the operation manual that came with your wireless router.
- If a security feature such as MAC Address filtering is enabled on your wireless router, disable it temporarily so that BR-500AC can communicate with your wireless router.
- If you plan to connect two or more network devices to BR-500AC using an Ethernet Hub, please go back to **Selecting a Wireless Network to Connect**. The **Client Mode** can be configured only when BR-500AC is running in **Configuration Mode**.

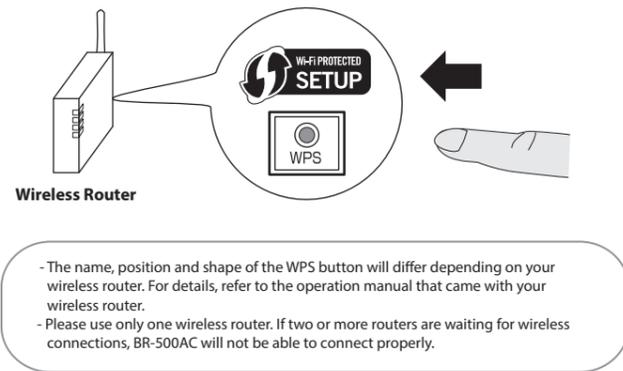

1 Connect the network device and BR-500AC using the LAN cable that came with BR-500AC. Connect the AC adapter to BR-500AC and the AC adapter's plug to an electrical outlet.

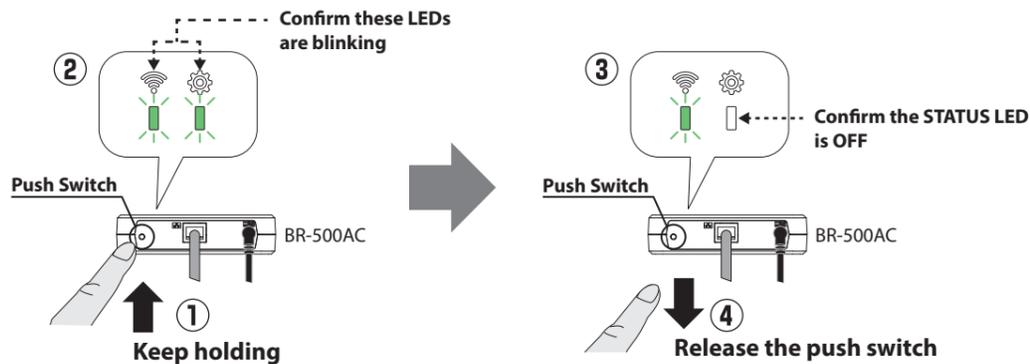

2 Turn on the network device connected to BR-500AC.

- * Some network devices require additional network settings. In such cases, refer to the manual that came with the network device.
- * When turning on BR-500AC and network devices, be sure to turn on BR-500AC first. Do not press the push switch then.

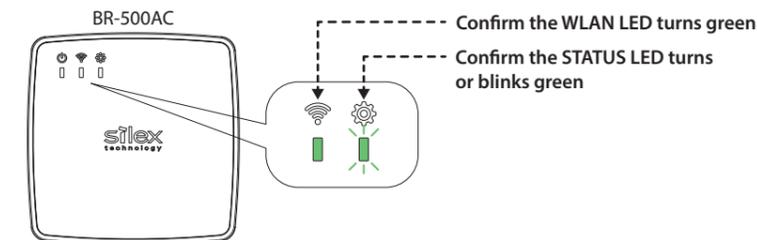

- Press the WPS button on your wireless router. Confirm that your wireless router is waiting for wireless connection.

- Press and hold the push switch at the front of BR-500AC. The WLAN LED and STATUS LED will start to blink green together. In 5 seconds, the WLAN LED will continue to blink while the STATUS LED will turn off. Release the push switch then.

- BR-500AC will start to communicate with your wireless router. When the wireless configuration is successfully completed, the WLAN LED turns green and the STATUS LED turns or blinks green.

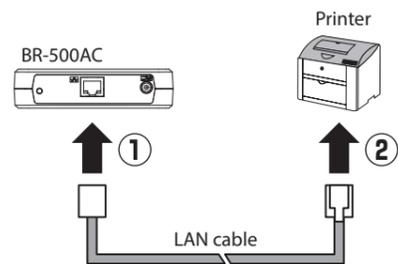

- It may take a while to complete the wireless configuration depending on your environment (up to 2 min).

*When wireless configuration has failed, the WLAN LED will flash rapidly.
Read the notes above and start from **3** again.

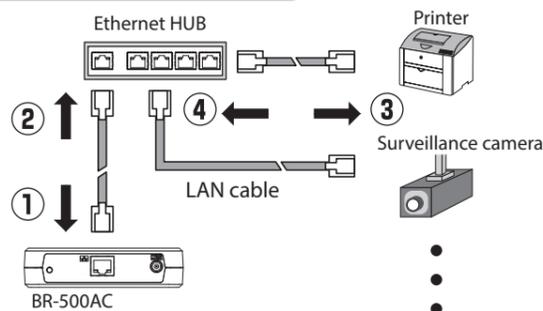

Step3 Connect a Network Device to Use Wirelessly

- Turn off the network device that you wish to use wirelessly and connect it to BR-500AC using the LAN cable.

Sample connection in Single Client Mode

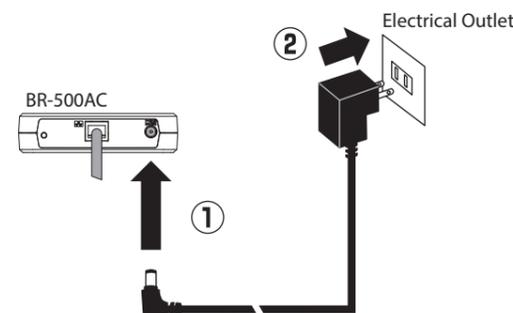

Sample connection in Multi-Client Mode

- Connect the AC adapter to BR-500AC and the AC adapter's plug to the electrical outlet.

- Turn on the network device connected to BR-500AC.

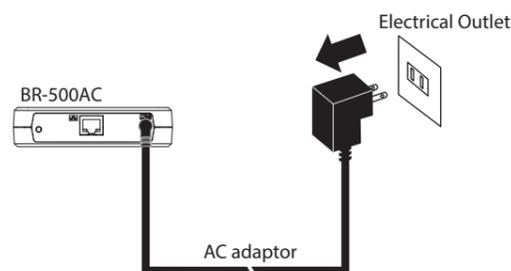

* Some network devices require additional network settings. In such cases, refer to the manual that came with the network device.
* When turning on BR-500AC and network devices, be sure to turn on BR-500AC first. Do not press the push switch then.

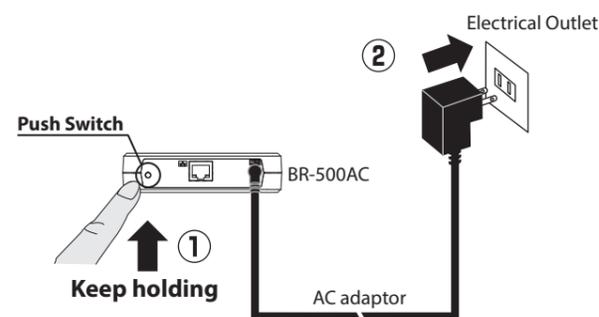

Factory Default Configuration

How to reset BR-500AC to the factory default settings is explained.

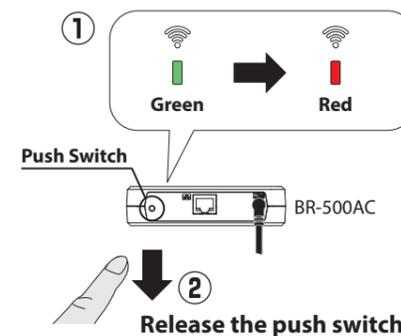

- Disconnect the AC plug of BR-500AC from the electrical outlet.

- While reconnecting the AC plug to the outlet, press and hold the push switch at the front of BR-500AC. Keep holding it.

- When the WLAN LED turns green and then to red, release the push switch. The factory default configuration begins. After the factory default configuration is completed, BR-500AC will restart.

How to Download User's Manual

The User's Manual can be downloaded from our website.

- Access the website below:

URL: <https://www.silextechnology.com/>

- Go to the **Support** page and download the User's Manual.

Product Name	BR-500AC
User's Manual	BR-500AC User's Manual

What's AMC Manager®?

AMC Manager® is an integrated device management software that can monitor and configure the Sillex products remotely over an IP network. If AMC Manager® is used, the operating status of BR-500AC units can be checked in a list view. There are two versions of AMC Manager®, the one is AMC Manager Free (free version) and the other one is AMC Manager (non-free version).

- To use AMC Manager (non-free version), a license key needs to be purchased.
- Please contact Sillex Technology to purchase a license key.

AMC Manager® can be downloaded from the Sillex Technology's website.

How to Download AMC Manager®

AMC Manager® can be downloaded from the Sillex Technology's website. Access the URL below to download it.

<https://www.silextechnology.com/>

- When the website is displayed, click **Support** from the top menu.
- Click **Software Download**.
- In the **Software Download** page, click **AMC Manager®**.
- Download AMC Manager®.

Trademarks

- AMC Manager® is a registered trademark of Sillex Technology.
- Wi-Fi Protected Setup is a trademark of Wi-Fi Alliance.
- Windows and Microsoft Edge are trademarks or registered trademarks of Microsoft Corporation in the United States and/or other countries.
- Safari is trademarks of Apple Inc., registered in the United States and other countries.
- Other company names and product names contained in this document are trademarks or registered trademarks of their respective companies.
